Abstract (en)

1. Apparatus for reading punched card (2) of the type comprising a set of needles (1), one of the ends of which rests against said card (2) so as to detect its perforations (2a) and so to cause a selection to be made involving the activation of elements (6) corresponding to the needles or leaving them at rest, characterised in that once the selection is made, means (12, 3a) are provided to reverse this selection by independent action on the needles (1) of a new perforation on the said card (2).

Abstract (fr)

Chacune des aiguilles (1) comporte deux cambrages (1b, 1c) propres à coopérer avec une plaque (12) que cette aiguillette traverse dans une ouverture (12a). Un déplacement horizontal de la plaque (12) assure le verrouillage en place de l'aiguillette de telle sorte que le support (3) du papier (2) peut être abaissé en vue de permettre l'avance de ce papier pendant le mouvement du train de barres (5). Mécanique d'armure du genre Verdol.
