Abstract (en)
[origin: EP0054678A1] 1. Device for parking several vehicles above one another with at least one platform provided with a lifting drive and a synchronising device for the compensation of deflections of the platforms asymmetrical to the centre plane of the platforms, comprising control linkage arrangements on both sides of the platform, each arrangement extending between the platform and a fixed support and a torsionally rigid connecting shaft between the control linkage arrangements, characterised in that each control linkage arrangement of the synchronising device comprises a control link (1) of which the end (2) which is distant from the connecting shaft (3) is mounted on an essentially horizontal rail guide (4).
