Abstract (en)

[origin: EP0054750A2] 1. Method for the production of pressed blocks of waste material (17), especially rubbish or garbage comprising bulky components, wherein the material introduced into a pressing box (1) through a filling shaft (5) is pressed with compression into a pressed block by a pressing plunger (2, 3; 21, 22) displaceable in the pressing box (1), and the pressed block thereafter is pushed in the pressing direction into a transport container (14) disposed in alignment behind the pressing box (1), characterized in that the material (17), especially the bulky material, passes, between its entry into the pressing box (1) and the pressing stage, through a pressing and disintegrating phase, in which the total quantity intended on each occasion for one pressed block is subdivided into partial quantities, the partial quantities are pre-compacted and then are again combined to the total quantity.
