Abstract (en)

[origin: WO8200082A1] Method and device allowing to separate into objects (B1, B2), a paste puddening having a cavity (11) filled with a liquid substance (10) by means of cutting shoes (20, 21) moving towards each other. There is thus obtained a series of objects one after the other (B1, B2), each object being narrowed at its back end by nipping rods (26, 27) and at the same time cut at the front end of the preceding object (B1) by blades (32, 33). The object is then moved transversally with respect to the feed direction (15) of the puddening (11) towards a packaging station.
