Abstract (en)
[origin: EP0055666A1] 1. A link rod panel for reinforced concrete, the panel being made by moulding a synthetic foam and being capable of being fixed by one of its faces against the inside face of shuttering, characterized in that it presents a set of regularly spaced transverse orifices (2) opening out in grooves (16, 20) in the face (18) intended to be applied against the shuttering, which grooves are at least as deep as the diameter of a link bar (13, 14, 15), thereby enabling folded link bars to be inserted inside the panel immediately prior to the panel being fixed to the shuttering.
