Abstract (en)  
[origin: EP0055677A2] The present invention relates to the attachment of construction panels to the carcass of a construction. It proposes panel attachment lugs each consisting of a plate provided with means of fastening to the framework or carcass, or pierced with holes permitting nailing, and bearing in its bottom part a cutout delimited by two weakened points, and it also proposes an attachment system using profiled sections, two sets of these lugs and grooves formed in the edge or in the borders of the construction panels. The invention permits the attachment of panels comprising a facing and an insulant, in particular for covering roofs. <IMAGE>
