Abstract (en)

[origin: EP0055874A2] A hooking and moving frame of containers for front hoisting trucks the side arms of which, extensible through two stages, for the hooking of the container can be drawn back so that the maximum size of the frame, in the condition of maximum withdrawal of the extensible arms, is reduced, consistently with the requirements of structure strength, and does particularly permit the hoisting truck to pass through the loading and stowage doors of container carrying vessels without removal of the hooking frame.
