Abstract (en)
[origin: EP0056075A2] 1. Process for the production of a practice cartridge for hand firearms with a casing (1) formed of steel for the reception of the propellant charge powder (7) and with projectile replica (2) tip-stretched on at its forward end, as well as with a base piece (3) with ignition arrangement arranged at the rear end, characterised by the production of the casing (1) with projectile replica (2) from a tubular piece which, as a result of drawing and/or pressing processes receives the wall thickness dimensions required for the intended purpose of the cartridge and is deformed into the shape of the casing with projectile replica as well as being closed at its one open end which affords the projectile replica, before charging with the propellant charge powder by means of a star, crimped, stamped closure or the like and being closed at its rear end by insertion of a separate base piece (3) with ignition arrangement (4) after charging with the propellant charge powder.
