Abstract (en)  
[origin: EP0056105A2] 1. Device for covering the joint between two construction parts, especially a roof covering or a r of edge bordering, with a center strip (1) made of rubber-elastic material (synthetic rubber) and two sheet metal edge strips (3) to be connected with parts of the construction located on both sides of the joint, as well as with a sheet metal covering (9) provided above the center strip (1) the sheet metal covering being vulcanized onto the synthetic rubber strip (1) along the upper side and the central area thereof, characterized in that the sheet metal covering (9) is vulcanized continuously along the entire length of the device with a width (5) that is substantially narrower than the area between the inner edges (3b) of the sheet metal edge strips (3).
