Abstract (en)
[origin: EP0056448A2] The invention relates to a socket (1) for an antenna for two- directional transmission and for a fitment to the walls of buildings. The socket (1) for the antenna contains a first coaxial socket (2) for extraction of radio signals and a second coaxial socket (3) for extraction of TV signals. According to the invention, a third connection (4) is provided. This is used for the reception of signals in a reversed channel leading to a central station which are used, for example, for text and video distribution, an ordering service or monitoring (fig 1). <IMAGE>
