Abstract (en)
[origin: EP0057248A2] In an automatic vending machine comprising a credit mechanism (4), consisting of a coin checker (5) and a coin counter (6) and a coin box (2) and a releasing device (3) below the credit mechanism (4), coupling points (27,30,35) are provided at least between the coin counter (6) and the coin box (2) and the coin counter (6) and the releasing device (3). The credit mechanism should be removable without tools and when it is inserted, an automatic coupling should be effected to the remaining devices. For this purpose, the credit mechanism (4) is supported pivotably towards the front and to a lifting-out position from an inserted position at the bottom and at the top the coin box (2) and the releasing device (3) at a vertical shaft (8) and can be removed from the shaft (8) into the lifting-out position. The shaft (8) is located in front of the coupling points (27,30,35) and at the coupling points (27,30,35), the parts to be coupled (25,26; 28,39; 36,37) are located freely opposite one another. <IMAGE>
