Abstract (en)

An electric contact for sheet cables (30) is formed with a rod terminated by two semi-cylindrical branches (3, 4) which are provided each with a point (6, 7) to penetrate the insulating material (33). The branches (3, 4) surround a central recess, having substantially a cylindrical shape, delimiting between the branches (3, 4) two diametrically opposite longitudinal slots (14) for receiving the conductor (31).

Abstract (fr)

Un contact électrique pour câbles en nappe (30) est formé d'une tige terminée par deux branches semi-cylindriques (3, 4) qui sont munies chacune d'une pointe (6,7) pour pénétrer dans la matière isolante (33). Les branches (3, 4) entourent un évidement central, de forme sensiblement cylindrique, délimitant entre les branches (3, 4) deux fentes longitudinales diamétralement opposées (14) pour recevoir le conducteur (31).
