Abstract (en)
[origin: EP0058132A2] The heating installation is constructed from prefabricated units, such as for example the connection unit (I) and the distributor unit (II), each of which is rigidly connected to the structural body. Radiators (40, 41) and/or radiant heating panels (42) are connected to these units. The units each form fixed points for the connection of the heating medium connection lines. These are wholly or partially designed as hoses (24, 25, 28, 29). <IMAGE>
