Abstract (en)

[origin: EP0058251A1] 1. Lining device for metallurgical vessels, particularly for steelworks converters, with an elevating working platform upon which are traversing brick conveying cars, whereby tracks (3, 4) on the working platform (1) run to several circumferential positions (5, 6, 7, 8) of the lining, characterized by the tracks (3, 4) each being allocated a brick conveying car (10, 11 or 12, 13), each brick conveying car (10 to 13) having a lifting table (14) and the lifting table (14) being allocated an adjustable brick bridging table (15) lying in the respective direction (3a, 4a) of the tracks (3, 4) facing towards the lining (9).
