Abstract (en)
[origin: EP0058383A2] In a rotary transmission lead-through for hanging loads, hydraulic passages leading from the stator to the rotor are provided for the hydraulic actuation of a gripper. The stator-side and rotor-side connections for the gripper hydraulics are arranged at locations of the stator or rotor which are protected against external mechanical effects. In addition, in order to permit simple, safe and rapid attachment of the gripper to the rotating device, screws passing from top to bottom through corresponding bores in the rotor are provided for fastening the gripper. <IMAGE>
