Abstract (en)
[origin: EP0058642A1] 1. Electronic timepiece having a plurality of functions and correction modes including a module mounted in a case, a first control means comprising a crown (7) fixed to a stem mounted in an opening in the case having at least two defined axial positions and rotatably displaceable in each axial position in order to control a function or a defined correction mode, and a second control means (8, 18) characterized in that operation of the second control means (8, 18) prior to operation of the crown (7) enables validation in the same defined axial position of the crown (7) of the control of a function or a different correction mode by rotation of the crown.
