Abstract (en)  
[origin: WO8103057A1] Arrangement for firing solid fuels, comprising a fuel space with a fire-place, to which combustion air is supplied in a controlled manner and from which fuel gases are lead off via a duct to a chimney. At this type of arrangement for firing solid fuels, for example wood, coke, coal, peat, chips and the like, the combustion normally is incomplete as soon as the air supply is throttled. For eliminating this problem, the invention suggests the arrangement of an additional fire-place (11) in the draught direction after the fire-place (14) of the fuel-space for combusting gases coming from said last mentioned space.
