Abstract (en)
[origin: EP0058731A1] 1. Plant-holding wall composed of a plurality of construction elements to erect supporting walls or rock linings with each element open-framed, constructed of one piece and consisting only of one longitudinal wall (1, 5) and of a minimum of two cross bracing walls (2, 2'; 6, 6'), the longitudinal wall extending beyond the two cross bracing walls displaying the entire surface of the cross bracing walls upward and the support surfaces pointing downward, characterized by the sectional wall being composed of construction elements of two design versions where, with the construction elements of the first design version, the cross bracing walls (2, 2') in a side elevation run vertical to the longitudinal walls (1) and, for the construction elements of the second design version, the longitudinal walls (5) in a side elevation being arranged at a angle of inclination (alpha) to the cross bracing walls (6, 6') and by the construction elements of the two design versions being superimposed alternately with longitudinal walls (1, 5) staggered.
