Abstract (en)
[origin: EP0058970A2] 1. A reinforced elastomer bearing for structures, in particular bridges, comprising at least one elastomer layer (2) which is connected by vulcanisation on both sides to respective steel plates (3) and whose peripheral faces (1) are of a concave configuration and in which the steel plates (3) at the two sides thereof project beyond the edge (4) adjoining same of the elastomer layer (2), characterised in that the concave faces (1) of the elastomer layer (2) are exposed and uncovered outwardly.
