Abstract (en)

[origin: EP0058990A1] 1. A closure for superstructures on commercial vehicles comprising a manual lever (16) actuating a closure element (17), said lever being arranged on a base plate (11) to be pivotal about an axis (13) extending perpendicularly to said plate, and comprising a securing means, which consists of a detent element acted upon by a spring (21) and guided within a bore (19) as well as of a detent recess, and which, in the closed position of the closure, stops the manual lever (16) in relation to said base plate (11), characterized in that the bore (19) for the detent element is arranged in said base plate (11), in that said detent element consists of a detent pin (18), in that said detent recess is designed as detent hole passing through said manual lever (16) and in that a displaceable disengagement pin (25) is positioned within said detent hole (23).
