Abstract (en)  
1. Container of folded cardboard, to the base of which supporting elements have been added, spaces being provided between them to give passage to the forks of a pallet conveyor, the said supporting elements consisting of cross-pieces, preferably of wood, made up of at least one sole piece 7 and two studs 4, 5, affixed to the ends of the sole piece, the said cross-pieces being inserted sandwich-wise between the outer and the inner flaps 1 of the container base, the said container being characterized by the fact that the outer flaps have side edges 2 folded to enable the supporting elements to slide and lateral cut-outs 3 in the prolongation of the said folding edges, the said folding edges being returned to the flat position to enable the supporting elements to be locked in their final position situated on a level with the cut-outs 3.

Abstract (fr)  
Palettisation d'un conteneur ou partie de conteneur appelée plateau ou cuvette. Utilisation du plancher formé par des rabats préalablement refoulés et découpés pour maintenir et positionner des longerons, "tasseaux avec plots". Lors de la fermeture, les rabats emprisonnent les éléments servant à la surélévation du conteneur ou partie de conteneur, permettant son utilisation par des moyens mécaniques genre transpalettes ou chariot élévateur. L'invention peut être utilisée pour toutes charges, toutes dimensions, en multipliant le nombre de découpes et d'éléments. La présente invention est applicable à tous matériaux et plus spécialement carton ondulé bois, plastique, métal etc...
