Abstract (en)

[origin: US4399212A] The present invention relates to a method and to a processing band for processing a sheet or strip of photographic material (1) which has been image exposed and is brought into surface contact, in the presence of water, with a carrier (2) which is impregnated with the required processing chemicals. The photographic material (1) which has been image exposed is repeatedly moved along a closed path and brought into surface contact with the processing band (2) along a specified portion of said path in the presence of water, the processing band (2) having at least two sections with different processing functions (A, B, C . . .) arranged one behind the other, with which every portion of the photographic material (1) comes successively into contact.
