Abstract (en)
[origin: EP0059930A2] 1. End profile for a flat-roofed building having a concrete ceiling (10) which rests on the masonry (11) of the building and, in the region of the roof edge, is surrounded by the end profile formed as a cover member (12a, 54), characterised in that each cover member (12a, 54) is an expanded plastics material foam member in which several parallel, vertical retaining plates (34, 56) are disposed with spacing therebetween, wherein each retaining plate (34, 56) has a surface region (38, 71) covered by the plastics material and a surface region (39, 72) covered by the concrete of the concrete ceiling (10) and has, in the surface region (38, 71) covered by the plastics material, several opening (40, 41, 73) for the passage of plastics material during the foaming process, as well as having, in the surface region (39, 72) covered by the concrete, several mounting holes (27, 74) for reinforcing bars (28) to be inserted therethrough.
