Abstract (en)  
[origin: EP0060213A1] 1. A stamping device for various characters having at least one stamping wheel on the circumferential face of which the characters to be stamped are provided in relief and associated with which is a bottom die, stamping wheel and bottom die being adapted to be pressed against the workpiece at both sides, from opposite sides of a workpiece to be distinguished by characters and capable of being cupped, and with the force necessary for carrying out the stamping operation, preferably for use in stamping characters in steel sheets which are used as body plates or chassis plates of motor vehicles, characterised in that the bottom die (m to m\*\*VI ) is constructed in such a manner that regions of the workpiece corresponding to the superimposed images of at least two characters of the same stamping wheel (p) can be deformed into the surface plane of the bottom die against a resistance ensuring the deformation of the workpiece, by means of the stamping wheel (p).
