Abstract (en)

[origin: EP0061383A1] 1. A switch comprising two electrical contacts (46, 47) arranged respectively on a support, and a movable plate (6) connected to a third contact, each switch being located inside a case, said case being composed of a base (2) made of a magnetic material and a cover (3) made of a non-magnetic material, said plate being adapted to pivot from the first to the second contact, or vice versa, under the action of an outside magnetic field, characterized in that the first (44) and second (45) supports of the contacts (46, 47) comprise a part made of an electrically conducting and non-magnetic material in order to reduce the losses of magnetic flux.
