Abstract (en)

A severing device (13) for individual forms which are joined together to form endless form webs (8). A severing rail (16) is arranged on a swivellable flap (15), the other edge of which constitutes a holding rail (17). For separating one form, the flap (15) is swivelled by pulling on the form and the holding rail (17) presses the form web (8) remaining in the machine against an abutment (21) so that the web is retained in the printing device.
