Abstract (en)

[origin: US4422305A] A cold storage element containing an eutectic brine cooled to a given freezing point for the cold storage purpose by one or more refrigerant-conducting pipelines for freezing the brine, and said element being arranged interiorly of the body (structure) of a refrigerating vehicle. The cold storage element comprises a plastics material shell which has a rectangular configuration and a longitudinal weg or rib interconnecting the opposing sidewalls. The pipeline for said refrigerant passes in hair-pin configuration through both an upper compartment and a lower compartment defined by said longitudinal rib. Mounting assemblies and air control slats for such cold storage element are also provided.
