Abstract (en)

[origin: WO8201177A1] Lateral conditioning for grouping and holding articles (8, 8a, 13, 13a) superposed according to their original direction. The side band (1) surrounding the periphery of a group of articles (8, 8a) has at least two series of parallel superposed slots (7, 7a) in which are engaged the angles or the sides (9, 9a) of the edges of the superposed articles (8, 8a) according to their original direction, said slots (7, 7a) being arranged alternately on the sides (3, 3a) of the band. The invention is used for lateral conditioning of articles.
