Abstract (en)  
[origin: WO8201385A1] The ring spinning frame comprises a main structure (1) which supports a box frame (11) on which disc-shaped magazines (14) may be detachably and loosely placed in a row. These magazines have on their underside a multiplicity of suspension devices (16) for attaching the bobbins (10). The frame (11) also serves as a rail configuration for a carriage (15) capable, by means of appropriate lifting devices (17, 18), during its travel from one end of the spinning frame to the other, to pick up at least one disc-shaped magazine (14) with empty bobbins (10) and to deposit at that place a disc-shaped magazine (14) with full bobbins (10). These measures enable the change of bobbins on the spinning frame to be fully automated.

Abstract (fr)  
Le metier a filer a anneaux comprend une structure principale (1) qui supporte un cadre (11) sur lequel on peut placer en rangee des magasins (14) en forme de disque, de facon amovible. Ces magasins presentent sur leur face de dessous une pluralite de dispositifs de suspension (16) pour attacher les bobines (10). Le cadre (11) sert egalement de rail pour un chariot (15) qui peut, au moyen de dispositifs de levage appropries (17, 18), lors de sa course d'une extremite a l'autre du metier a filer, saisir au moins un magasin (14) en forme de disque avec des bobines vides (10) et deposer a cet emplacement un magasin (14) en forme de disque garni de bobines pleines (10). Cette disposition permet d'automatiser totalement le changement des bobines sur le metier a filer.
