Abstract (en)

1. Weatherproof covering for building units, in particular light-weight building units, which have, at least in the outer region, empty spaces, the entrances to which from the outside have cross-sectional areas which constitute more than 5% of the outer surfaces, characterised in that to obtain a waterproof covering the outer region is provided with a polyurethane composition which increases in volume by 30% to 300% during hardening.

Abstract (de)

Die wetterfeste Abdeckung einer Leichtbauplatte mit poriger Oberfläche wird durch Aufbringen einer Polyurethanmasse erzielt, die während der Aushärtung im Volumen zunimmt, so daß auch bei dünner Schicht durch die in die Poren eingedrungene Masse eine intensive Verankerung zu dem Trägermaterial entsteht.
