Abstract (en)

The fence assembly (1) comprises a plurality of panels (2) of semi-rigid net-like material having a plurality of closed meshes (3). Ridges (5), provided by channels (6) are formed adjacent an edge (7) of each panel. The panels (2) are joined by portions (4) of the mesh (3) of the ridge (5) of one panel projecting through meshes (3) of the other panel (2). A retaining bar in the form of a fence post (9) is passed through the channel (6) between the engaging meshes (3) to prevent withdrawal of the meshes.
