Abstract (en)
[origin: EP0062865A1] 1. Process for dyeing textile materials consisting of wool and cellulose fibres in one bath and in one step by the exhaustion principle, characterised in that the textile material is treated in the presence of one or more reactive dyestuffs, each having a hydrolysis constant of at least $0.8 \times 10^{-2} \text{ min}^{-1}$ (hydrolysis constant at pH 11 and 40 degrees C) and in the presence of one or more neutral salts at a pH value falling slowly from pH 9-11 to pH 5-6 and at a simultaneously slowly increasing temperature.
