Abstract (en)  
[origin: EP0062881A1] 1. Panelling having wall panels (1, 2), the supporting frames (4) of which have folded-over edge flanges (5, 6) to neighbouring frames and consist of a material, for example sheet steel, which is able to support a load, and the supporting frames (4) of which accommodate heat insulating material (7), the supporting frame being secured to supporting elements (9) by means of spaced holders (8), characterised in that wall panels (1, 2), the supporting frame (4) of which has higher edge flanges (5) at one side edge than at the opposite side edge (6) and wall pannels (3) having edge flanges (6) which are of the same height, but overall lower, and which are arranged between the supporting frames having the outer higher edge flanges (6), are combined, the lower edge flanges being lower than the higher edge flanges to an extent such that the heat insulating material can be applied between the outer panelling, e.g. trapezoidal sheets (10).
