Abstract (en)

[origin: EP0062914A2] 1. Apparatus for removing freshly pressed articles (6) in the form of slabs of concrete or like shapable material from a press (1) and for depositing the articles (6) on to a conveyor means provided with at least one pallet (7), using a carriage which is displaceable with respect to the press (1) along a guide means and which has tables (5) for receiving the articles (6) and which receives at least two articles or rows of articles which are arranged in side-by-side relationship normal and/or parallel to the direction of displacement, and a pivotal means which is rotatable about a horizontal pivot axis (17) for transferring the articles (6) from their horizontal position of reception on the carriage (4) into an upright deposit position on the pallet (7) in such a way that the articles (6) which are laid down one behind the other in the direction of transfer are deposited in succession, characterised in that the carriage (4) is subdivided into such a number of carriage portions (10, 11) extending parallel to the direction of the pivot axis (17) that each carriage portion (10, 11) carries only one article (6) or row of articles (6) parallel to the pivot axis (17), that the carriage portions (10, 11), at least in a portion of the path of transfer movement, are movable separately in a controlled fashion in timed succession and that the position of the table or tables (5) at least of the carriage portion or portions (11) following the carriage portion (10) which is next adjacent to the deposit location, on passing through the transfer path of movement, is defined by the combination of an arcuate movement and a rectilinear movement.
