Abstract (en)
A container and closure assembly, wherein the container body has in combination a mouth through which the contents of the container can be dispensed, an annular non-drip pouring lip around the mouth, an external screw thread spaced from the pouring lip and, between the pouring lip and the start of the screw thread, an external annular concave portion and wherein the closure has an internal screw thread on the skirt of the closure spaced from the top of the closure by an amount substantially equal to the vertical dimension of the pouring lip and the concave portion so that when the closure is screwed fully onto the container body the inside of the top of the closure makes contact with the rim around the mouth of the body.
