Abstract (en)

[origin: EP0063079A1] 1. A device for positioning a radial burner (6) for a condensation boiler whose flame outlet orifices are formed at the surface of a cylindrical grill with a vertical axis, received entirely within a combustion chamber defined by a cylindrical sheet of water tubes (7) having vertical axes, characterised by the fact that the radial burner (6) is disposed eccentrically with respect to the vertical axis (BB') of the combustion chamber.
