Abstract (en)

[origin: ES8304266A1] Internal combustion engine fuel injection pump of the type comprising an injection piston having a head with a helical ramp and provided with a device for adjusting in time the beginning of the fuel injection delivery. The adjusting device comprises a valve for closing and opening a bypass passage adapted to connect the said admission chamber to a space communicating with the chamber filling fuel source, and a system for the control of the valve including a control device for closing the valve depending on the angular position of a rotary member of the engine, such as a crankshaft, and for opening the valve in response to a partial vacuum created in the admission chamber by the suction stroke of the injection piston.

Abstract (fr)

Le dispositif de réglage comprend un clapet (13) de fermeture et d'ouverture d'un canal de dérivation (14) susceptible de relier la chambre de pompage (5) à un espace (10) communiquant avec la source de combustible de remplissage de la chambre (5), et un système de commande (17-27) de ce clapet (13) comportant un dispositif de commande pour la fermeture de ce clapet en fonction de la position angulaire d'un organe rotatif (27) du moteur, tel que l'arbre manivelle.
