Abstract (en)
[origin: WO8200771A1] Areas of a flexible material blanket (1) extending on an endless path are each lifted by a carriage (3) circulating underneath the blanket, which does not move. Thereby, the blanket forms travelling waves on which one can move continuously as long as desired, that is to say a) running down the forward slope of the wave motion, for example on roller skates or on a skateboard, or b) sliding, for example on skis or on a surfing board, in the case where the blanket is coated with a sliding coating consisting of snow or water.
