Abstract (en)

[origin: EP0063675A1] 1. Apparatus for the transverse supporting and wrapping of plank-like or beam-like reinforcements (22, 25) beneath articles (13 to 17) on a table (18, 19, 20) or a table-like frame with mutually spaced open-topped grooves (24) extending beneath the supporting plane, which are all arranged in an upper plane and serve as guides for reinforcements (25), where, below these grooves (24) of the upper plane, further grooves (23) displaced by 90 degrees thereto and mutually spaced in a lower plane are located likewise as guides for reinforcements (22), where each groove (23) of the lower plane has a band guide channel (27) at its underside in the middle, characterised in that band guide channels are located below or in the lower region of the upper grooves (24) and, above the lower grooves (23), the parts (30) of the band guide channels associated with the upper grooves are arranged to be hingeable or movable away at least in the whole width of the lower grooves (23).
