Abstract (en)
[origin: US4409693A] The invention relates to a bubble bath device with varyingly large and separately operable air exit holes for large and small bubble production. The bubble bath device has at least one device body which in turn contains at least one air chamber. The air exit holes of the air chamber of chambers are provided for at least one treatment type. In addition, the device comprises tubular conduits, particularly hoses, which also have air exit holes, constructed for at least one further treatment type.
