Abstract (en)
[origin: EP0064089A1] 1. Apparatus for coal dust gasification under pressure, in which the coal dust and/or a coal dust/liquid mixture is blown in a reactor and gasified, in the presence of steam and acid, to a gas containing CO₂ and H₂, so that a clinker film is formed at least at the discharge end of the reactor, characterised by a reactor with, at the discharge end, a flow conducting device (5, 12) which is formed as a table.
