Abstract (en)

[origin: ES8305609A1] Device for folding a colada bar in a installation of containing steel colada. Consist of contrasting the ferrostatic pressure of a bar (1) through roller pairs (7, 7) (8, 8) of support in a transition curve (5) between an arched path (6) and a rectilineal path (4) of the support roller train (9). The transition curve is continuously adapted by the own bar, along the path of the roller train of the bending section, to possible variations of the colada parameters and of the bar.
