Abstract (en)  
[origin: EP0064308A2] The invention relates to a gaming machine comprising a keyboard and a plurality of display members arranged side by side and being controllable with the aid of the keyboard by means of an electrically and/or electronically operating mechanism, said display member having a plurality of particulate elements which can luminesce independently of one another by the supply of current so that with the aid of the display members luminescing signs can be formed whereby the display members and the electrically and/or electronically operating mechanism are designed so that a luminescing sign is displayed at least at three superjacent places in order of succession in a manner such that the impression is given that the sign is moving from top to bottom.
