Abstract (en)

[origin: EP0064491A1] The mould (1) can be fixed by means of laterally projecting support plates (2) on the lifting table (3) by means of tie bolt (28) penetrating the support plates. In order to be able to dismount and install the mould (1) rapidly while avoiding manipulations requiring force and outlay on adjustment, the fixing device is constructed as a rapid fixing device which is formed in each case from two bushes (24, 25) which are provided with mutually corresponding helical sliding surfaces (23) which form a thread, a bush (24) of the rapid fixing device being provided in each case with a tie bolt (28) which penetrates a support plate (2) of the mould (1). <IMAGE>
