Abstract (en)  
[origin: EP0064727A1] 1. A container (1) for liquids, having a container bottom (1') which in the position ready for emptying forms a base perpendicular to which the actuation of bellows is directed for the purpose of emptying through a mouthpiece opening (6) from which extends an emptying tube (15) reaching down to the container bottom (1'), characterized in that two container sidewalls (3) lying opposite one another and the crosswall (7) lying opposite the mouthpiece opening (6) form a bellows (B) which in the region of the sidewalls (3) diverges in the shape of a V in the direction of the crosswall (7).
