Abstract (en)

1. Drinking cup permitting the mixing of two doses of components at the time of use, of the type comprising a glass-shaped receptacle (1, 21), the opening of which is closed by a heat-welded cover (7, 27), and a phial (4, 14, 24), one of the two components being enclosed by the said phial while the other is arranged in the space provided in the receptacle around this phial, characterised in that the opening of the phial (4, 14, 24) which faces downwards is closed by application against the bottom of the said receptacle, and in that the bottom of the receptacle has an axial tube (2, 22) of low height which is provided with a sealing fitting (5, 15) and whose inner wall is threaded.

Abstract (fr)

Le gobelet comprend un récipient (1) en forme de verre dont le fond présente une tubulure axiale (2) dans laquelle se visse la base ouverte d'une douille (3) renfermant une fiole (4), l'ouverture de cette dernière étant appliquée de manière étanche contre une garniture (5). Lorsque cette douille est dévissée, le contenu de la fiole se mélange à celui du verre. Le brevet décrit trois variantes.
