Abstract (en)
[origin: EP0065296A1] 1. A fixed point and sliding point distancing support for the supporting structures of curtain wall claddings which are back ventilated and equipped with thermal insulation, which can be screwed to the building wall by means of plastics plugs and of which the foot (10, 29) of the distancing support, which is pivotable and displaceable on the plug and can be located at right angles to the plane (19) of the supporting structure, is adjustable horizontally on the plug by oval slots (12, 31), characterised by distancing supports (1, 20) which are adjustable on the plug head (13, 32) to produce central action of the resulting compressive and tensile forces acting on the distancing support (1, 20) as a result of the fact that these are constructed in the form of outwardly curved spherical or cylindrical domes (14, 30) at the plug slots (12, 31).
