Abstract (en)
[origin: EP0065674A2] 1. Plaster profile strip, intended for the production of planar underplasters, with a profile edge formed as offtake edge and two expanded metal fields, which extend away therefrom while including an acute angle, as fastening limbs for mounting at a wall to be plastered, characterised by the use for the production of planar insulating plasters of great thickness as rail as thereby, that the expanded metal fields (14, 15) display large mesh size and extend on the sides remote from the profile edge (11) away directly from narrow strip bands (12, 13), which are arranged in V-shape and form the profile edge, in respective planes defined by them.
