Abstract (en)
[origin: EP0065742A2] The vending aid consists of a bearing device and at least one plate (1) mounted thereon having slide tracks which are open towards the bottom, are connected to one another at an angle and in which slide hangers bearing the materials are arranged so as to be displaceable, the slide tracks being formed by bearing tracks (20), which extend in parallel with slight spacing and end before the rear lateral edge (16) of the plate (1), and at least one display track (21, 22, 24) which is arranged in front of the front ends of the bearing tracks (20) and is connected to the latter. In order to design a vending aid of this type in such a way that the material requirement for the curtain specimens and the space requirement per curtain specimen is considerably reduced, at least one display track (24) has the course of an oscillation.
