Abstract (en)

[origin: EP0065766A2] 1. Encoding support in the shape of a plate, for fitting to parts, which are to be worked individually, of a motor vehicle to be assembled, in particular parts of the body, which encoding support contains optically detectable information on the nature of the working of the individual component, the association with a particular motor vehicle and further manufacturing data, characterised by several cover pieces (16, 17, 18) which are arranged one above the other and are transparent at least above the information and which are individually fixed releasably to the encoding support (10) and are formed from one plastic or different plastics which are resistant to the chemical, electrical and thermal stresses occurring during the working of the individual component, that is to say are resistant to chemicals and solvents, electrically insulating and heat-resistant.
